

What is Xpring?

[Xpring](#) is Ripple's open platform for money that makes it easy for developers to integrate payments into their applications. The Xpring platform builds upon open-source software, open standards and open networks to allow for sending and receiving real-time payments in any currency.

[xpring.io](#) is a developer site that serves as a hub for developers to access tools, services and documentation that help enable payments in their products and apps.

The screenshot shows the GitHub repository for Xpring-SDK. At the top, the repository name 'xpring-eng / Xpring-SDK' is displayed, along with statistics: 9 Unwatch, 11 Unstar, and 1 Fork. Below this, navigation tabs include Code, Issues (0), Pull requests (1), Projects (0), Wiki, Security, Insights, and Settings. The main description states: 'The Xpring SDK is a set of language specific libraries for interacting with the Xpring Platform (XRP/ILP)'. A 'Manage topics' link is also present. A summary bar shows 10 commits, 3 branches, 0 packages, 0 releases, and 2 contributors. Below this, there are buttons for 'Branch: master', 'New pull request', 'Create new file', 'Upload files', 'Find file', and 'Clone or download'. A recent pull request by keefertaylor is shown, merging pull request #4 from xpring-eng/keefertaylor-patch-2. The latest commit is 00f3776, 26 days ago. The file list includes README.md and Add Java Library. The README.md file is expanded, showing the following content:

Introduction

Xpring SDK is a set of libraries and services designed to make interaction with Xpring easy and intuitive. Xpring SDK works consistently across languages and platforms to create a cohesive development experience, regardless of the language, platform, or environment you are building your app in.

Architecture

The development experience is comprised of two components:

- A set of language-specific client-side libraries
- A server-side component that handles requests from the client-side libraries and proxies them to an XRP node

Client-Side Libraries

Xpring SDK provides the most commonly used functionality on the XRP Ledger. Functionality and programming paradigms are common across all libraries in Xpring SDK.

Xpring Challenges

We want to see real world applications that use XRP and/or Interledger that are scalable. The rest is up to your imagination!

Data Sources:

<https://www.xrpchat.com/>
<https://xrpl.org/get-started.html>
<https://xpring.io/docs#xrpl>

Start Building

<https://github.com/ripple/xrp-api>

Judging criteria:

What we're looking for in a successful project:

- Code completion
- Use of XRP
- Chain interoperability
- Next steps (how to scale)

Where can hackers learn more:

- xpring.io
- xrpl.org
- interledger.org
- webmonetization.org
- codius.org

Prizes

- (1) Apple Watch per team member up to 5 people

Additional Resources

-  Join _____ in **#Xpring** channel. Use this channel to ask our technical team questions and receive updates.
- Come to our **workshop on Friday, Feb 7 from 2:45-3:15pm** where we'll walk through how to use the Xpring SDK & APIs.
- **Stop by the Xpring table** and pick up some awesome swag! Come by anytime to show us what you're working on, and talk with team members about how you can work with us.
- **Tweet and tag @XpringDev**, and use the **hashtag #Xpring** in your social channels.

Career Opportunities

Be a part of the Xpring/Ripple team. Apply with us!
